

15 Ways To Protect Your Business From a Cyber Attack!

Using intelligent monitoring, enterprise-class solutions, and a security-first approach to everything we do, we are able to harden your IT and help you meet the most ridged security compliances.

<h3>SECURITY ASSESSMENTS</h3>  <p>Ensuring you have a thorough understanding of your security posture is paramount. Conducting regular audits across all facets of your network is essential for uncovering any significant vulnerabilities and defining prioritized actions.</p>	<h3>SPAM FILTERING</h3>  <p>A growing number of cyberattacks originate from email, underscoring the importance of securing every inbox to mitigate the risks targeting your end-users.</p>	<h3>TEAM AWARENESS AND TRAINING</h3>  <p>Educating your staff about the diverse aspects of cybersecurity can yield substantial advantages for your overall defense mechanisms. Frequently, the end-user serves as both the initial and final line of defence.</p>	<h3>PASSWORDS</h3>  <p>By mandating that your team adhere to specific policies and practices, your business can experience reduced exposure to cyberattacks.</p>
<h3>UPDATES AND SECURITY PATCHES</h3>  <p>An outdated computer or unsupported software is naturally more vulnerable to threats. Maintaining up-to-date tools will contribute to making it harder for threats to penetrate your systems.</p>	<h3>ENDPOINT SECURITY PROTECTION</h3>  <p>Use a centrally monitored system designed to counter today's most severe cyber threats can prevent significant disruptions and even revert ransomware attacks.</p>	<h3>SECURITY INCIDENT & EVENT MANAGEMENT</h3>  <p>We employ big data and sophisticated enterprise-grade monitoring software to safeguard every device on your network from the most sophisticated threats.</p>	<h3>DARK WEB MONITORING</h3>  <p>The Dark Web serves as a sanctuary for cybercriminals to distribute pilfered data, including passwords. Dark Web scanning services aid in detecting when YOUR data has been compromised, enabling prompt resolution of affected accounts.</p>
<h3>BACKUP</h3>  <p>Data backup is your ultimate defence in the event of a cyberattack. If your data is compromised, having a backup ensures that you can restore it and resume your operations. It's essential to backup your data both locally and in the cloud.</p>	<h3>MOBILE DEVICE SECURITY</h3>  <p>The mobile devices your employees carry pose potential security risks. Implementing robust centralized policies can help mitigate these risks.</p>	<h3>FIREWALL</h3>  <p>When aiming to shield yourself from threats, a firewall aids in reducing the number of threats that penetrate your network.</p>	<h3>WEB GATEWAY SECURITY</h3>  <p>In the face of an emerging threat on the Internet, it's crucial that your security solutions can swiftly respond and block it. Dynamic, cloud-based security solutions are continuously updated and poised to safeguard your network.</p>
<h3>ENCRYPTION</h3>  <p>Implementing encryption for files can greatly enhance your security. This includes encrypting stored files within your network and encrypting information exchanged with business partners.</p>	<h3>CYBER INSURANCE</h3>  <p>In the event of failure of your other security measures, cyber insurance can shield your business from the financial repercussions of such an incident.</p>	<h3>MULTI-FACTOR AUTHENTICATION</h3>  <p>Despite our reliance on passwords, they are not sufficiently secure in today's landscape. Requiring an additional form of identity verification can significantly enhance the protection provided by passwords.</p>	<h2>ZETTABYTES</h2> <p>Call: 01 870 4999 Email: hello@zbg.ie</p> <p>Unit 3c, Swords Business Park, Swords, Co.Dublin, K67C5Y6</p> <p>www.zettabytes.ie</p>
